Introduction

TerMus is a software for the design and verification of energy performances of buildings, with parametric object input, based on BIM technology.

Data input is managed graphically: the objects with specific thermal properties are available in a dedicated library and are used to create the BIM model or they are applied directly to the drawing elements loaded in different formats (e.g. DXF, DWG, etc.). The realized model allows to automatically obtain the boundary conditions so that design phase is not separated by the energy performance verification. In this way, apart from having the 3D representation of the project, the Energy Information Model of the building system is also available.

TerMus is able to import IFC files: its editor allows to explore all the relationships between the elements and the properties of the IFC model. It is also possible to browse entities by filters, selections and color changing.

Starting from version “v.50.00a”, TerMus is certified for CV2.0 import.

A wide range of user support content, including video tutorials and discussion forums, explain all software features together with those linked to the IFC format and are available online.
