Introduction

usBIM.platform is the first BIM Collaboration Platform created to optimize all the activities of the construction supply chain, starting from the design phase, through to construction and facility management.

usBIM.platform helps professionals of the architecture, engineering and construction sectors (AEC) to create and correctly manage BIM models for each discipline (architectural design, plant design, energy performance, structural analysis, work site management and maintenance) in a single data sharing environment (CDE, Common Data Environment).

The collaborative usBIM.platform is an open platform, because it is based on buildingSMART's IFC standard. buildingSMART certification guarantees that file creation is fully consistent with its data structure together with management and data sharing of documents and models between all professional roles regardless of which BIM authoring software, BIM tools and the BIM collaboration plug-in is used.
